

HIGHER EDUCATION AT A GLANCE

■ India will have the largest population in the world in the higher education age bracket by 2030; increasing urbanisation and income levels will drive demand for higher education

■ India's GER lags behind that of developed countries such as the US, Switzerland, Japan and the UK as well as the developing countries such as China, Brazil, Malaysia and the Philippines

■ Compared to developed countries India witnesses more enrolment in Arts and Engineering while enrolment in Medical studies is lower.

■ The higher education system has grown significantly in the past two decades in terms of the number of institutions and enrolment. GER in higher education has more than doubled (22.5 per cent) since 1999-2000.

■ Student enrollment has grown 12 times in the last four decades, increasing at a CAGR of 10.4 per cent since 2000-01

■ The number of universities/institutions of national importance has registered a seven-fold growth in the last four decades. There are 700 universities at present as against 256 in 2000-2001.

■ We now have more than 33,000 affiliated colleges with around 20,000 added after 2000-01.

■ Number of central

institutions like IISER, NITs, IIMs, IITs and Central Universities has doubled over the past 6-7 years.

■ Distance education that offers affordable education to masses has grown

significantly. Enrolment in distance education has more than tripled in the last decade growing at a CAGR of 11 per cent.

■ The number of institutions offering distance education

is almost five times the number two decades ago

■ A variety of courses and career-oriented programs have emerged across different streams

■ Almost half the graduates

are not employable in any sector, based on the industry standards of employability.
